FinGro Project: Target Grade Alignment

Goal: High Distinction

Our team is fully committed to achieving a High Distinction for our FinGro project, a finance and grocery planner, by focusing on key areas outlined in the rubric:

1. Server and Code Quality

- We ensure our server is well-documented, clean, and functional, following the MVC model.
- We're sticking to coding standards like camelCase and PascalCase for consistency.

2. UI and Prototyping

- We're using mockups to design the user interface.
- The design will be polished and well-researched.

3. Functionality and Testing

- We'll implement advanced CRUD operations and conduct thorough testing, including unit tests.
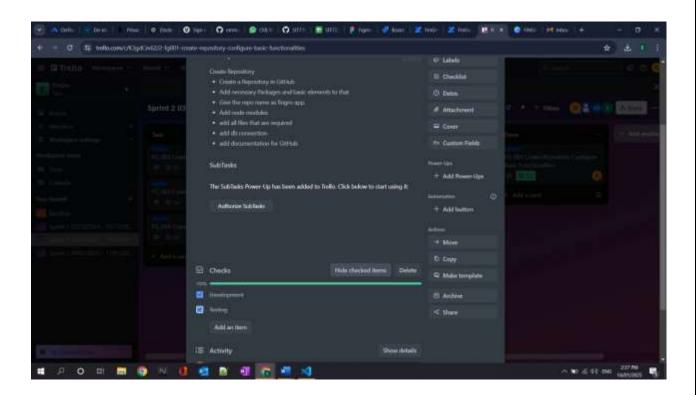

4. Documentation

- We're using Atlassian for detailed documentation, including an SRS document and a clear, actionable README.
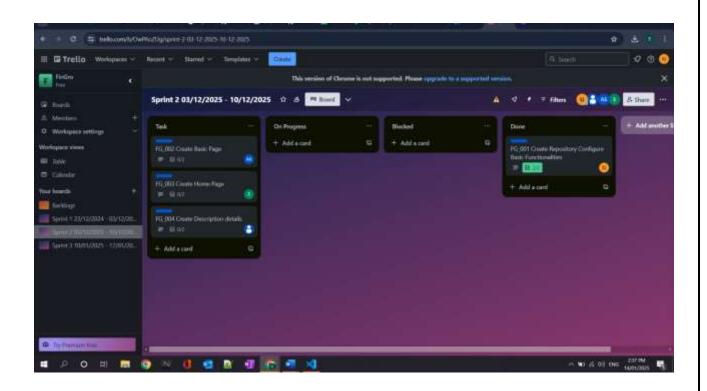

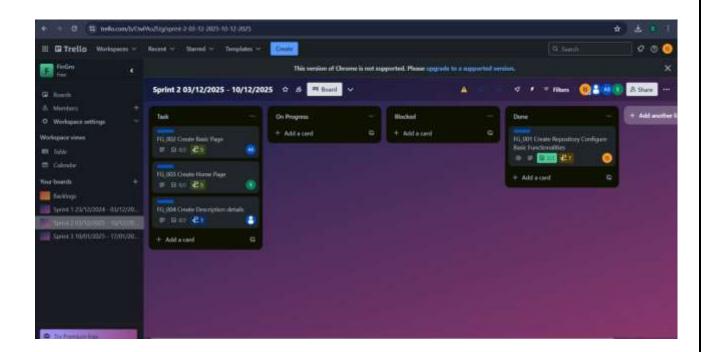

5. Tools and Collaboration

- We're using Git branches effectively (master, test, team, and individual branches).
- Our Trello boards are organized with story points for smooth task management.

By dividing tasks fairly and regularly seeking feedback, we're confident we'll hit our target and achieve success together.
